

Supplemental Materials for the paper: Pesticides pollution of small streams in Germany

Eduard Szöcs, Marvin Brinke, Bilgin Karaoglan, Ralf B. Schäfer

August 29, 2016

Contents

1	Data Cleaning	5
2	Overview on compiled data	7
3	Are small agricultural waters more polluted compared to bigger streams?	19
3.1	RAC Exceedances	19

List of Figures

S1	Overview on data cleaning steps.	6
S2	Complete Linkage Cluster Dendrogram of Jaccard Similarity of analysed compound spectra between federal states.	17
S3	Distribution of precipitation at sampling occasions. top: at sampling date. bottom: at day before sampling.	18
S4	Raw data used for the model in equation xxx and Figure xxx of the main article. Color codes the number of RAC exceedances (on a log-scale). Grey points denote sites without any exceedance.	19

List of Tables

S1	Overview on chemical samples. Only data from running waters and grab sampling is shown. ^a : Abbreviations according to ISO 3166-2:DE. ^b : Including metabolites	7
S2	Analysed chemical compounds. ^a Authorized in Germany (Source: BVL, 2015). ^b Authorized in the EU (Source: EU). ^c [ug/L]. ^d chemprop: Read-Across (Schüürmann et al., 2011); epa: US EPA (U.S. EPA, 2015); malaj:(Malaj et al., 2014); ppdb: Pesticides Properties database (Lewis et al., 2016); none: no LC50 could be found. ^e Maximum Annual Concentration Environmental Quality Standard [ug/L]. ^f Regulatory Acceptable Concentration [ug/L] (Source: German EPA).	7

1 Data Cleaning

Each of more than 30 datasets have been cleaned and homogenized separately, before combining in a common database. Cleaning steps comprised (Figure S1 gives a graphical overview).

1. Structure: Structure has been adjusted to the database structure.
2. Coordinates: Coordinates have been transformed to a common Coordinate Reference System (DHDN / 3-Grad Gauss-Krüger Zone 3 (EPSG:31467) and duplicates merged.
3. Chemicals: Chemical names and identifiers have been unified using the webchem package (Szöcs, 2016).
4. Identifiers: Unique identifiers have been assigned.
5. Units: All concentrations have been converted to $\mu\text{g}/\text{L}$. Values below limit of quantification have been set to zero.
6. Other meta-data: meta-data has been standardised.
7. Temporal resolution: The temporal resolution of the database is 1 day. Data below this resolution has been aggregated by maximum.
8. Validity Checks: Simple rules for validity checks have been implemented (e.g. no negative concentrations).

Figure S1: Overview on data cleaning steps. After cleaning data has been stored in a relational spatial PostgreSQL database.

2 Overview on compiled data

Table S1: Overview on chemical samples. Only data from running waters and grab sampling is shown. ^a: Abbreviations according to ISO 3166-2:DE. ^b: Including metabolites

Figure S2: Complete Linkage Cluster Dendrogram of Jaccard Similarity of analysed compound spectra between federal states. Abbreviations of state names according to ISO 3166-2:DE.

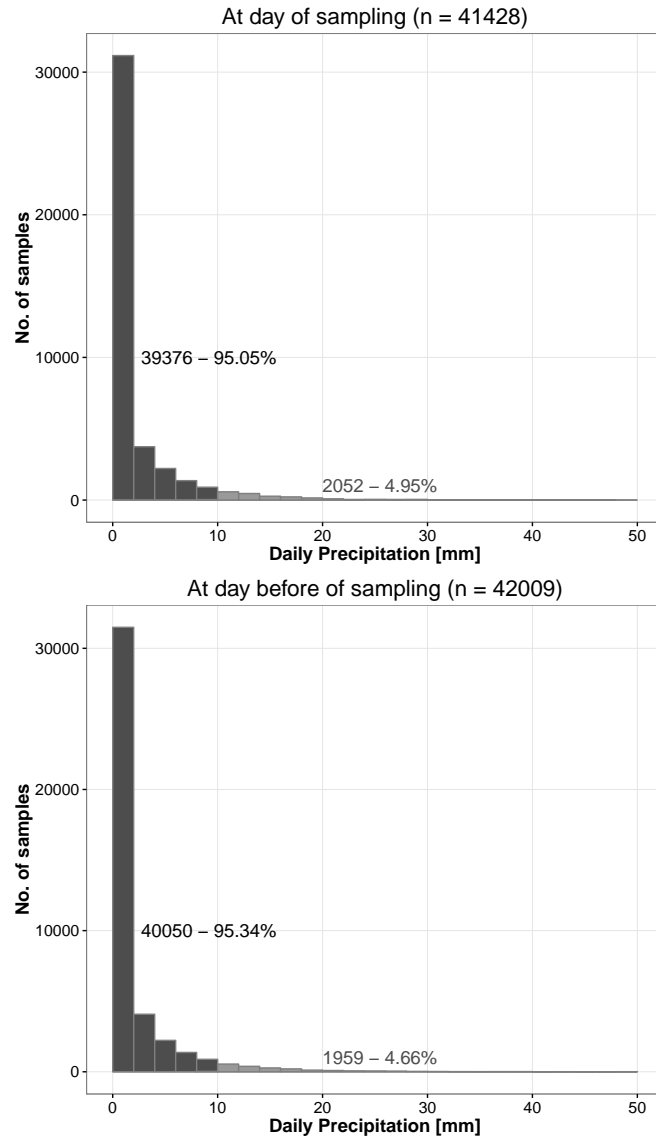

Figure S3: Distribution of precipitation at sampling occasions. top: at sampling date.
bottom: at day before sampling.

3 Are small agricultural waters more polluted compared to bigger streams?

3.1 RAC Exceedances

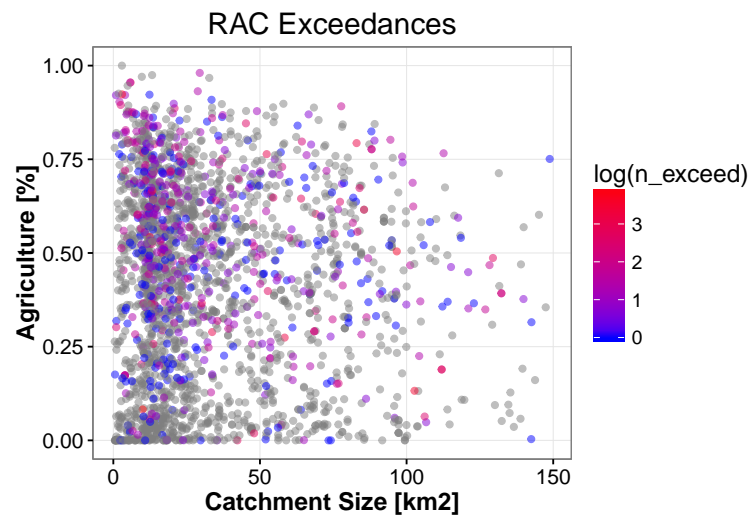

Figure S4: Raw data used for the model in equation xxx and Figure xxx of the main article. Color codes the number of RAC exceedances (on a log-scale). Grey points denote sites without any exceedance.
