### Supplemental Materials for the paper: Pesticide exposure in small streams in Germany

Eduard Szöcs, Marvin Brinke, Bilgin Karaoglan, Ralf B. Schäfer October 12, 2016

#### Contents

1	Data Cleaning	5
2	Catchment size - stream width relationships	7
3	Overview on compiled data	8
4	Thresholds for agricultural land use and catchment size	20
5	Effect of precipitation and season on RQ	21
6	Pesticides in small water bodies	26

### List of Figures

S1	Overview on data cleaning steps	6
S2	Relationship between catchment size and stream width	7
S3 S4	Number of sampling occasions per year and month	
S5	compound spectra between federal states	
S6	Raw data used for the model in equation 2 and Figure 3 of the main article.	20
S7 S8	Distribution of precipitation at sampling occasions	
S9	Distribution the number of quantified compounds in the samples from small water bodies	26
S10	Proportion of samples with detects in SWB	27

#### List of Tables

S1	Overview on chemical samples. Only data from running waters and grab	
	sampling is shown. <sup>a</sup> : Abbreviations according to ISO 3166-2:DE. <sup>b</sup> : In-	
	cluding metabolites	8
S2	Overview on pesticides in the database. <sup>a</sup> Authorized in Germany (Source:	
	BVL, 2015). <sup>b</sup> Authorized in the EU (Source: EU). <sup>c</sup> Regulatory Accept-	
	able Concentration [ug/L] (Source: German EPA)	9
S3	24 pesticides for which we modelled the relationship with precipitation	
	and seasonality. Order is the same as in Figure 5 of the articles. See Table	
	S4 for model coefficients	21
S4	Coefficients and CI from per compound models. Bold values denote coef-	
	ficients where the CI for precipitation encompasses zero. Coefficients are	
	on the link scale (log for $mu$ and logit for $u$ )	21

#### 1 Data Cleaning

More then 30 datasets have been cleaned and homogenized separately, before combing into a common database. Cleaning steps comprised (Figure S1 gives a graphical overview).

- 1. Structure: Structure has been adjusted to the database structure.
- 2. Coordinates: Coordinates have been transformed to a common Coordinate Reference System (DHDN / 3-Grad Gauss-Krüger Zone 3 (EPSG:31467)) and duplicates merged.
- 3. Chemicals: Chemical names and identifiers have been unified using the webchem package (Szöcs, 2016).
- 4. Identifiers: Unique identifiers have been assigned.
- 5. Units: All concentrations have been converted to  $\mu g/L$ . Values below limit of quantification have be set to zero.
- 6. Other meta-data: meta-data has been standardised.
- 7. Temporal resolution: The temporal resolution of the database is 1 day. Date below this resolution has been aggregated by maximum.
- 8. Validity Checks: Simple rules for validity checks have been implemented (e.g. no negative concentrations).

Figure S1: Overview on data cleaning steps. After cleaning data has been stored in a relational spatial PostgreSQL database.

# 2 Catchment size - stream width relationships

We studied the relationship between catchment size based on three datasets containing this informations: Data delivered by the federal state Thuringia, Voß et al. (2015) and Fernández et al. (2015) (both from Rhineland-Palatinate). We fitted to each dataset separately and to the combined dataset a power-function. The resulting models are shown in Figure S2.

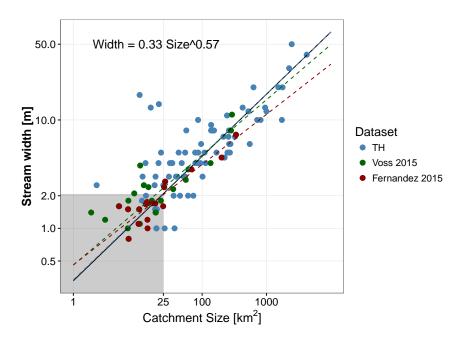

Figure S2: Relationship between catchment size and stream width. A power function has been fitted to each dataset separately and the combined dataset (black line and equation). The gray rectangle marks the estimated with for a catchment size of 25km<sup>2</sup>.

#### 3 Overview on compiled data

Table S1: Overview on chemical samples. Only data from running waters and grab sampling is shown. <sup>a</sup>: Abbreviations according to ISO 3166-2:DE. <sup>b</sup>: Including metabolites

 $\begin{tabular}{ll} Figure S5: Average silhouette width for different cluster sizes. Two clusters showed maximum silhouette width. \\ \end{tabular}$ 

## 4 Thresholds for agricultural land use and catchment size

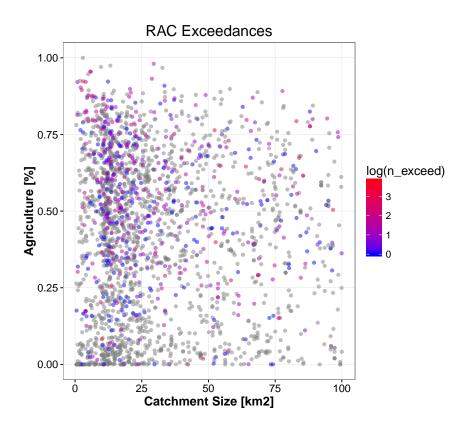

Figure S6: Raw data used for the model in equation 2 and Figure 3 of the main article. Color codes the number of RAC exceedances (on a log-scale). Grey points denote sites without any exceedance.

# 5 Effect of precipitation and season on RQ

Table S3: 24 pesticides for which we modelled the relationship with precipitation and seasonality. Order is the same as in Figure 5 of the articles. See Table S4 for model coefficients.

	Compound	CAS	Group	%>LOQ	$\mathrm{no.}>\mathrm{LOQ}$	total no.

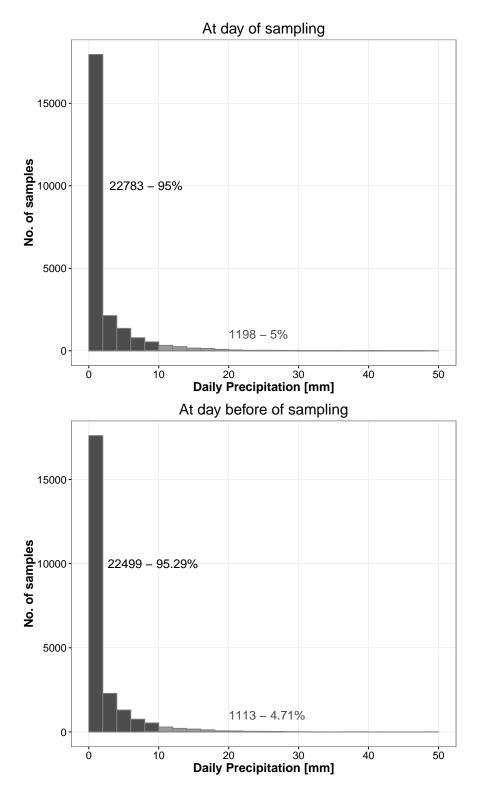

Figure S7: Distribution of precipitation at sampling occasions. top: at sampling date. bottom: at day before sampling.

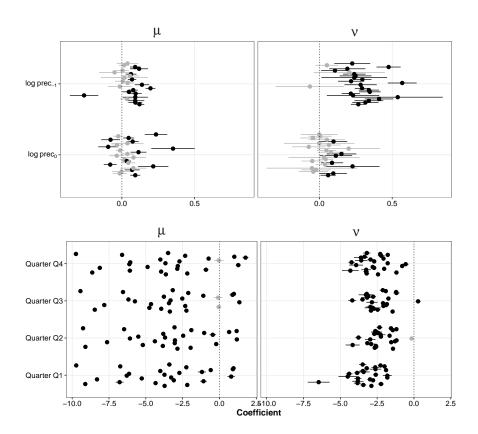

Figure S8: Graphical representation of coefficients from table S4. Top row: Effect of precipitation at day before sampling and at day of sampling. Bottom row: estimates for the four Quarters. Each dot represent one compound (in the order described in table S3). Coefficients where the CI encompasses zero are shown in gray colour. Coefficients are shown on the link scale (log for  $\mu$  and logit for  $\nu$ ).

### 6 Pesticides in small water bodies

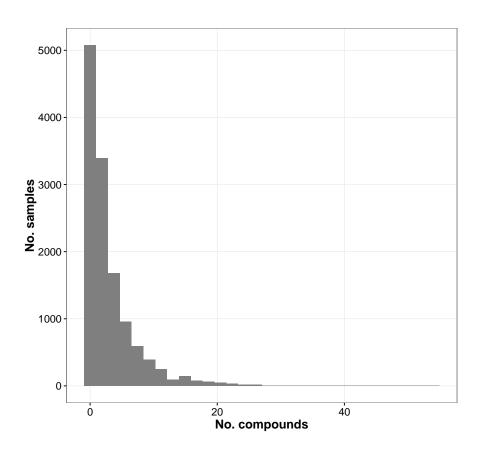

Figure S9: Distribution the number of quantified compounds in the samples from small water bodies.

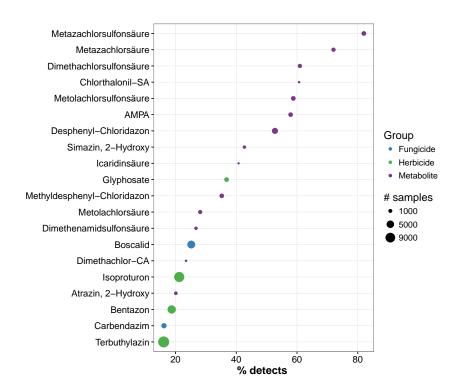

Figure S10: Proportion of samples with detects in SWB. Only Compounds with more than 100 samples and 15% of detects are show.
