1 Data Cleaning

Each of more then 30 datasets have been cleaned and homogenized separately, before combing in a common database. Cleaning steps comprised (Figure 1.1 gives a graphical overview).

- 1. Structure: Structure has been adjusted to the database structure.
- Coordinates: Coordinates have been transformed to a common Coordinate Reference System (DHDN / 3-Grad Gauss-Krüger Zone 3 (EPSG:31467) and duplicates merged.
- 3. Chemicals: Chemical names and identifiers have been unified using the webchem package (Szöcs, 2016).
- 4. Identifiers: Unique identifiers have been assigned.
- 5. Units: All concentrations have been converted to $\mu g/L$. Values below limit of quantification have be set to zero.
- 6. Other meta-data: meta-data has been standardised.
- 7. Temporal resolution: The temporal resolution of the database is 1 day. Date below this resolution has been aggregated by maximum.
- 8. Validity Checks: Simple rules for validity checks have been implemented (e.g. no negative concentrations).
