List of Figures

| S1 | Overview on data cleaning steps | 6 |
|----------|--|----|
| S2 | Relationship between catchment size and stream width | 7 |
| S3 S4 | Number of sampling occasions per year and month | |
| S5 | Distribution of precipitation at sampling occasions. top: at sampling date. bottom: at day before sampling | 22 |
| S6 | Raw data used for the model in equation xxx and Figure xxx of the main article. Color codes the number of RAC exceedances (on a log-scale). Grey points denote sites without any exceedance. | 23 |

List of Tables

| S1 | Overview on chemical samples. Only data from running waters and grab | |
|----|--|----|
| | sampling is shown. ^a : Abbreviations according to ISO 3166-2:DE. ^b : In- | |
| | cluding metabolites | 8 |
| S2 | Overview on pesticides in the database. ^a Authorized in Germany (Source: | |
| | BVL, 2015). b Authorized in the EU (Source: EU). c Regulatory Accept- | |
| | able Concentration [ug/L] (Source: German EPA) | 9 |
| S3 | 24 pesticides for which we modelled the relationship with precipitation | |
| | and seasonality. Order is the same as in Figure 5 of the articles. See Table | |
| | S4 for model coefficients | 19 |
| S4 | Raw data for figure 5 in the main article. Bold values denote coefficients | |
| | where the CI encompasses zero | 19 |

1 Data Cleaning

More then 30 datasets have been cleaned and homogenized separately, before combing into a common database. Cleaning steps comprised (Figure S1 gives a graphical overview).

- 1. Structure: Structure has been adjusted to the database structure.
- Coordinates: Coordinates have been transformed to a common Coordinate Reference System (DHDN / 3-Grad Gauss-Krüger Zone 3 (EPSG:31467) and duplicates merged.
- 3. Chemicals: Chemical names and identifiers have been unified using the webchem package (Szöcs, 2016).
- 4. Identifiers: Unique identifiers have been assigned.
- 5. Units: All concentrations have been converted to $\mu g/L$. Values below limit of quantification have be set to zero.
- 6. Other meta-data: meta-data has been standardised.
- 7. Temporal resolution: The temporal resolution of the database is 1 day. Date below this resolution has been aggregated by maximum.
- 8. Validity Checks: Simple rules for validity checks have been implemented (e.g. no negative concentrations).

Figure S1: Overview on data cleaning steps. After cleaning data has been stored in a relational spatial PostgreSQL database.

2 Catchment size - stream width relationships

We studied the relationship between catchment size based on three datasets containing this informations: Data delivered by the federal state Thuringia, Voß et al. (2015) and Fernández et al. (2015) (both from Rhineland-Palatinate). We fitted to each dataset separately and to the combined dataset a power-function. The resulting models are shown in Figure S2.

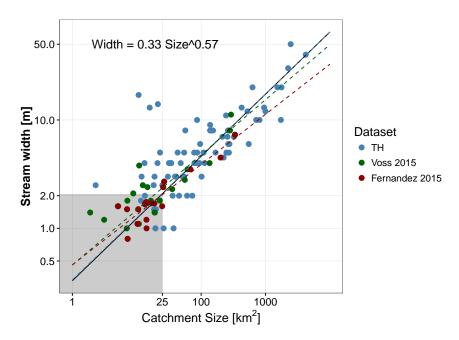

Figure S2: Relationship between catchment size and stream width. A power function has been fitted to each dataset separately and the combined dataset (black line and equation). The gray rectangle marks the estimated with for a catchment size of 25km².

3 Overview on compiled data

Table S1: Overview on chemical samples. Only data from running waters and grab sampling is shown. ^a: Abbreviations according to ISO 3166-2:DE. ^b: Including metabolites

4 Effect of precipitation and season on RQ

Table S3: 24 pesticides for which we modelled the relationship with precipitation and seasonality. Order is the same as in Figure 5 of the articles. See Table S4 for model coefficients.

| | Compound | CAS | Group | $\%{>}\mathrm{LOQ}$ | $\mathrm{no.} > \mathrm{LOQ}$ | total no. |
|---------|----------------------------|-----------------|-------------|---------------------|-------------------------------|-----------|
| 1 | Azoxystrobin | 131860-33-8 | fungicide | 9.65 | 676 | 7002 |

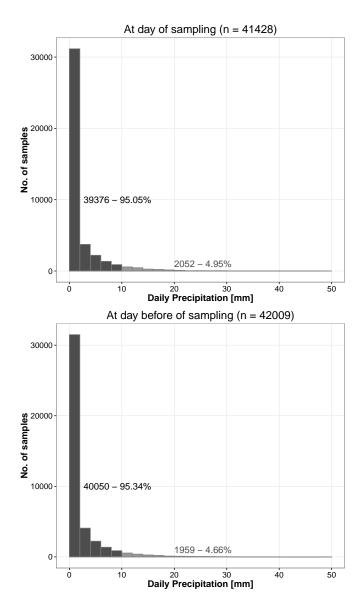

Figure S5: Distribution of precipitation at sampling occasions. top: at sampling date. bottom: at day before sampling.

5 Pollution of small streams

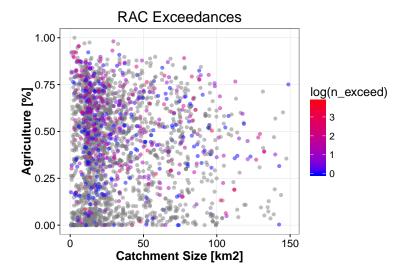

Figure S6: Raw data used for the model in equation xxx and Figure xxx of the main article. Color codes the number of RAC exceedances (on a log-scale). Grey points denote sites without any exceedance.
