# Supplemental Materials for the paper: Pesticide exposure in small streams in Germany

Eduard Szöcs, Marvin Brinke, Bilgin Karaoglan, Ralf B. Schäfer

#### Contents

1	Data Cleaning	5
2	Overview on compiled data	7
3	Thresholds for agricultural land use and catchment size	23
4	Effect of precipitation and season on RQ	24
5	Pesticides in small streams	29

# List of Figures

S1	Overview on data cleaning steps	6
S2	Number of sampling occasions per year and month	21
S3	Complete Linkage Cluster Dendrogram of Jaccard Similarity of analysed	
	compound spectra between federal states	21
S4	Average silhouette width for different cluster sizes	22
S5	Raw data used for the model in equation 2 and Figure 3 of the main article.	23
S6	Distribution of precipitation at sampling occasions	27
S7	Graphical representation of coefficients from table S4	28
S8	Cumulative distribution of the number sites exceeding RAC	31
S9	Proportion of samples with detects in small streams	32
S10	Distribution of the number of quantified compounds in the samples	

## List of Tables

S1	Overview on chemical samples	7
S2	Overview on pesticides in the database	7
S3	23 pesticides for which we modelled the relationship with precipitation and seasonality	24
S4	Coefficients and CI from per compound models	24
S5	Overview on RAC exceedances of the 76 compounds with more the 1000	20
	measurements	29

#### 1 Data Cleaning

More then 30 datasets have been cleaned and homogenized separately, before combing into a common database. Cleaning steps comprised (Figure S1 gives a graphical overview).

- 1. Structure: Structure has been adjusted to the database structure.
- 2. Coordinates: Coordinates have been transformed to a common Coordinate Reference System (DHDN / 3-Grad Gauss-Krüger Zone 3 (EPSG:31467)) and duplicates merged.
- 3. Chemicals: Chemical names and identifiers have been unified using the webchem package (https://github.com/ropensci/webchem).
- 4. Identifiers: Unique identifiers have been assigned.
- 5. Units: All concentrations have been converted to  $\mu g/L$ . Values below limit of quantification were set to zero (and can be used to identity non-detects).
- 6. Other meta-data: meta-data has been standardised.
- 7. Temporal resolution: The temporal resolution of the database is 1 day. Date below this resolution has been aggregated by maximum.
- 8. Validity Checks: Simple rules for validity checks have been implemented (e.g. no negative concentrations).

Figure S1: Overview on data cleaning steps. After cleaning data has been stored in a relational spatial PostgreSQL database.

### 2 Overview on compiled data

Table S1: Overview on chemical samples. Only data from running waters and grab sampling is shown. <sup>a</sup>: Abbreviations according to ISO 3166-2:DE. <sup>b</sup>: Including metabolites

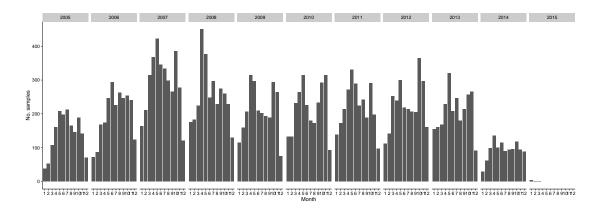

Figure S2: Number of sampling occasions per year and month.

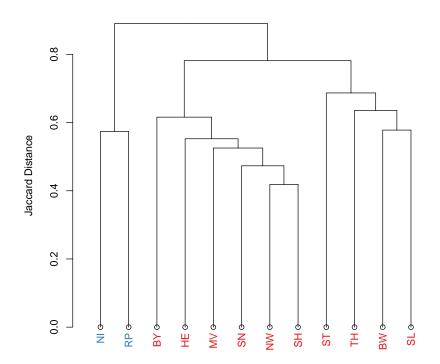

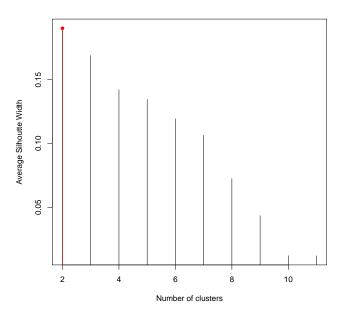

Figure S3: Complete Linkage Cluster Dendrogram of Jaccard Similarity of analysed compound spectra between federal states. Abbreviations of state names according to ISO 3166-2:DE.

 $\begin{tabular}{ll} Figure S4: Average silhouette width for different cluster sizes. Two clusters showed maximum silhouette width. \\ \end{tabular}$ 

# 3 Thresholds for agricultural land use and catchment size

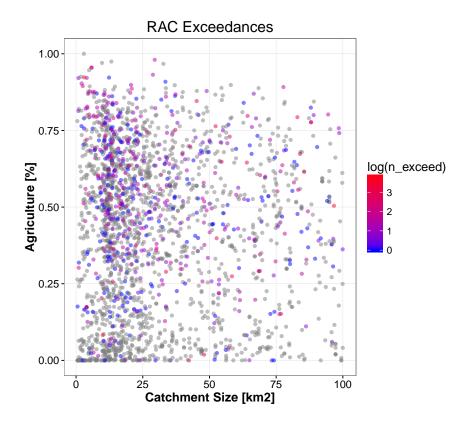

Figure S5: Raw data used for the model in equation 2 and Figure 3 of the main article. Color codes the number of RAC exceedances (on a log-scale). Grey points denote sites without any exceedance.

# 4 Effect of precipitation and season on RQ

Table S3: 23 pesticides for which we modelled the relationship with precipitation and seasonality. Order is the same as in Figure 5 of the main text. See Table S4 for model coefficients.

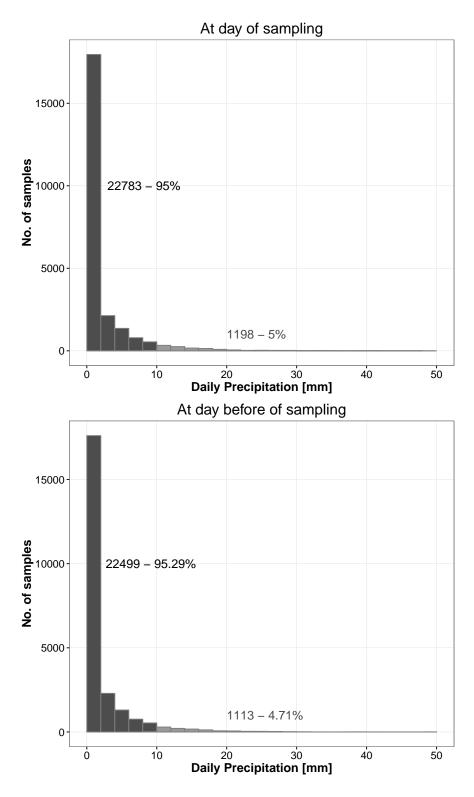

Figure S6: Distribution of precipitation at sampling occasions. top: at sampling date. bottom: at day before sampling.

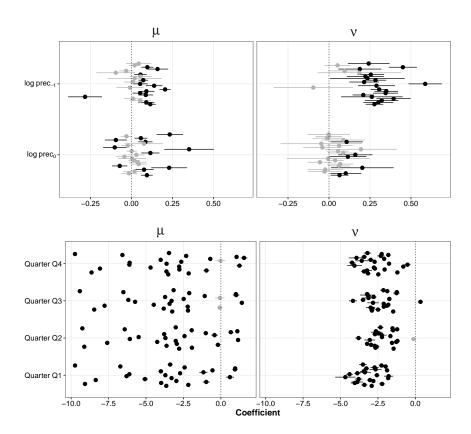

Figure S7: Graphical representation of coefficients from table S4. Top row: Effect of precipitation at day before sampling and at day of sampling. Bottom row: estimates for the four Quarters. Each dot represent one compound (in the order described in table S3). Coefficients where the CI encompasses zero are shown in gray colour. Coefficients are shown on the link scale (log for  $\mu$  and logit for  $\nu$ ).

### 5 Pesticides in small streams

Table S5: Overview on RAC exceedances of the 76 compounds with more the 1000 measurements. No. = number of measurements; % RQ >1 = RAC exceedances; % RQ >1 | >LOQ= RAC exceedances as fraction of detects.

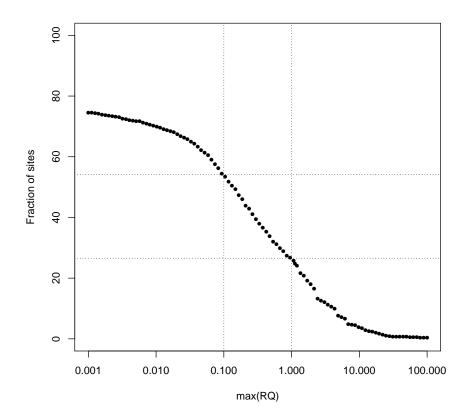

Figure S8: Cumulative distribution of sites exceeding RAC. Dotted lines indicate fraction of sites exceeding a RQ of 1 and 0.1. 23% of sites showed no detection of compounds with RAC and are not shown due to logarithmic x-axis.

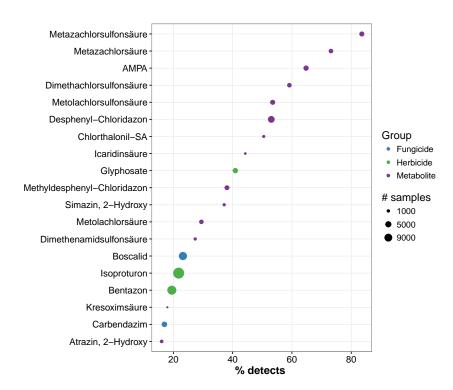

Figure S9: Proportion of samples with detects in small streams. Only Compounds with more than 100 samples and 15% of detects are show.

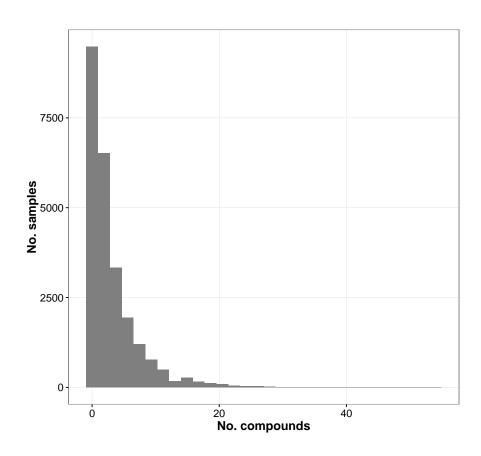

Figure S10: Distribution of the number of quantified compounds in the samples.
